## OUR STORY

### JACK'S ABBY IS PROUDLY INDEPENDENT AND FAMILY-OWNED

Jack's Abby Craft Lagers has been brewing world class lager using traditional German standards and American innovation since 2011. Founded by brothers Jack, Eric, and Sam Hendler, Jack's Abby has become a **mainstay of the craft brewing scene** in the Northeast and nationwide.

Since its inception, the brewery has continued to uphold its mission of creating **high-quality products** that **honor tradition and the spirit of inspired innovation**.

With an **entrepreneurial heart and a passion for people**, we take pride in learning from and contributing to our vibrant community.

The Hendlers grew up in a family that promoted entrepreneurship and hard work. Spending summers with their grandfather and working at the family's ice distribution company, they learned the value of committed family members and loyal employees - the foundation on which Jack's Abby is based.

## OUR PROCESS

### SILO & DELIVERY

We use the finest domestic & imported ingredients in all our beers. Specialty hops & malts contribute to the lager's body, color & flavor.

1

### MILL

Malted barley, or "malt" goes into the mill & is crushed into grist. This exposes the starch under the grain's hull.

2

### MASH MIXER

Malt & water are combined & go through either a step infusion, where the mash is warmed up slowly to 170 degrees, or through a decoction process where part of the mash is boiled to increase malt character.

### LAUTER TUN

The wort, or sugar water, is then separated from the barley husk & other plant material.

4

5

### KETTLE

The liquid wort flows into the kettle for boiling. A 2000 gallon batch will boil steadily for about 75 minutes, during which time we periodically add hops.

### FERMENTATION TANK

Once in a fermentation tank (our biggest tanks are 240 bbl), yeast is added to our cool wort. Fermenting at about 52° F over the course of a week, the yeast converts the wort's sugars into alcohol & carbon dioxide. The beer is then lagered at 32° F to condition & age until ready for drinking.

6

### CENTRIFUGE

The centrifuge spins the beer with a force of up to 10,000 times gravity to separate yeast & protein out of the beer.

7

### PACKAGING

When ready, we fill kegs, bottles, & cans with fresh batches of lager. Our lines clean, fill, cap & label before the bottles & cans are manually placed into boxes.

8

### DISTRIBUTION

Finally, our beer is distributed to stores, bars, restaurants, and served right here for you to enjoy!
